

COVID-19:

Everything You Need to Know About the booster shot

54.8%

Of the world's population have already received at least one Covid Vaccine

All countries need to review their strategies now.

All nations are called to take the fight against this virus seriously. They should communicate well with their populations, and pull all the stops when it comes to looking for ways to mitigate the spread.

Dr. Michael J. Ryan, WHO Informal Advisory Group, March 2020

Who can get a booster?

Anyone above the Age of 18

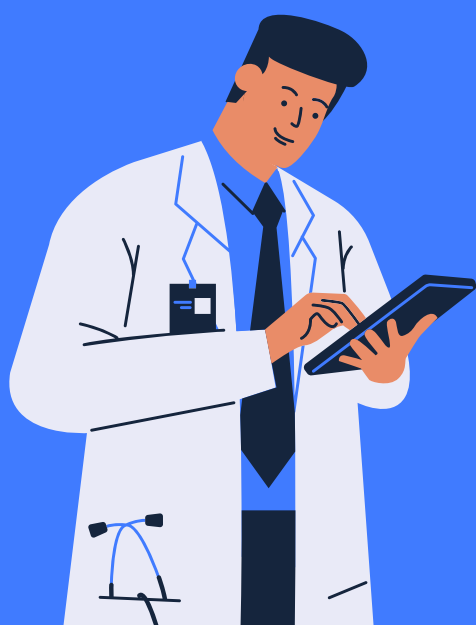

When can one get a booster?

< 6 months after 1st shot

Which boosters are there?

Pfizer, J&J, Moderna, AstraZeneca

The "panic-then-forget" cycle must be stopped. Instead, a "whole-of-society" approach must be adopted. It is imperative that the International Health Regulations (IHR) be implemented in countries of all income levels.

Every country should do everything to follow through on prioritizing, funding, and implementing preparedness interventions.

COVID-19:

Everything You Need to Know

Which booster should i take?

There is ideally no specific vaccine meant for take, however, the World Health Organization has some approved vaccines that are recommended for take internationally, these are the vaccines that are approved by the local government and can be accessed by citizens of these specific countries. In terms of health risk analysis, there have been reported cases of blood clots after vaccination, however, these cases have only happened in about 1 per 10 million and research around this topic is still ongoing. The WHO however urges persons to access these vaccines and take them as soon as they can because they have been tested and measured for quality administration Sasidharan et al (2020)
